View 3: Attribution vs Regression

Attribution vs Regression Analysis

Attributed Revenue Share by Channel

Regression-Estimated Impact by Channel

Key Insights:

- Search drives the highest share of attributed revenue (~43%), indicating strong conversion capture.
- Regression analysis shows Referral and Paid Social have higher marginal impact, suggesting stronger incremental contribution.
- Email and Organic channels show negative coefficients, likely due to overlap or diminishing returns.
- Attribution reflects credit allocation, while regression reflects impact — both should be used together for decision-making.

Key Opportunities:

- New users show slightly higher conversion than returning users, indicating strong acquisition performance.
- Returning users generate similar revenue per session, suggesting stable monetization.
- Search dominates across categories, contributing the largest share of revenue.
- Mobile drives a significant portion of total revenue, but conversion rates vary across channels.
